

## Description

CASA 550 is a sprayable, one-part, water-based adhesive that bonds instantly. It is exceptional for bonding flexible polyurethane foam, latex foam, fabric, polyester fiber.

## Advantages

- 100% waterborne system
- Excellent Heat resistance
- Cost efficient
- Instant bonds

## Application

Surfaces must be clean, dry and dust free. Adhesive can be applied to both surfaces with a spray gun. However, in some instances, single sided application is acceptable. Hold the spray gun 8-12 inches from the substrate surface and overlap the pattern slightly with each pass to ensure uniform coverage. CASA 550 bonds quickly after spraying depending on atmospheric conditions. The user can place the substrates together up to 20 minutes after spraying if required by the production process. After 20 minutes the adhesive may dry, causing an unsatisfactory bond. The final bond strength is achieved once the residual water has evaporated. Wait 24 hours before performing final bond testing. Clean up wet adhesive with CASA Quick Clean 6.

## Packaging

- 5 gallon pails
- 55 gallon fiber drums
- 275 gallon disposable totes

## Shelf Life

Six months from the date of manufacture in unopened container.

## Manufacturer's Statement

The statements and technical information contained in this technical data sheet are based on tests and data which CASA Adhesive, Inc. believes to be reliable, however the occurring and completeness of such statements and technical information is not guaranteed. CASA Adhesive, Inc. makes no warranty expressed or implied, including, but not limited to any implied warranty of merchantability or fitness for a particular purpose. User is responsible for determining if the product is fit for a particular purpose and is suitable for user's method of application.
